
Revive Dusk

Control the Light. Keep the View.

Not every problem needs full privacy — some just need the right light. Revive Dusk is a tintable smart film designed specifically for solar control. It does not switch to full opacity — instead, it dynamically reduces sun glare, manages heat gain, and filters harsh UV light while preserving your view to the outside.

HOW IT WORKS

Revive Dusk tints and adjusts to reduce the intensity of incoming light without blocking your view entirely. Rather than switching between clear and frosted, it modulates light levels — giving you comfort and protection without sacrificing the connection to natural light and outdoor scenery.

- **Unactivated:** Standard glass view
- **Activated:** Reduced glare, filtered UV, managed heat — view maintained

KEY SPECIFICATIONS

Film Type	Tintable Smart Film
Privacy Capability	None — solar/glare control only
Function	Glare reduction, UV filtering, heat management
View Preservation	Yes — maintains outside visibility
Lifespan	15+ years
Application	Retrofits to existing glass

WHY REVIVE DUSK

- Eliminates glare on screens, surfaces, and workspaces without blocking the view
- Reduces heat gain — lower energy costs without sacrificing natural light
- Filters UV rays — protects furniture, flooring, and artwork from sun damage
- Preserves your view — unlike full privacy film, the outdoors stays visible
- Clean, unobtrusive look — no blinds, no shades, no cords
- 15+ year lifespan — set it and forget it

IDEAL APPLICATIONS

- West-facing offices and conference rooms with afternoon glare problems
- Sunrooms and enclosed patios
- Retail storefronts where merchandise display and visibility matter
- Residential living rooms, kitchens, and dining areas with scenic views
- Vehicles and transportation applications
- Any space where natural light is valued but sun intensity creates discomfort

Stop squinting. Start seeing clearly.
