
Revive Inverse

Privacy Activated. Clarity by Default.

Smart film — but not as you know it. Revive Inverse flips the script on traditional smart film technology. Using PNLC (Polymer Network Liquid Crystal) film, it is crystal clear in its natural, unpowered state — and switches to frosted privacy only when power is applied. For spaces where clarity is the constant and privacy is the exception, Revive Inverse is the most energy-efficient solution available.

HOW IT WORKS

Unlike standard PDLC film that requires continuous power to stay clear, Revive Inverse requires no power for transparency. Privacy is activated on demand — meaning your energy consumption is tied only to the moments you actually need it.

- **Power OFF:** Crystal clear (default — no energy use)
- **Power ON:** Frosted, private

KEY SPECIFICATIONS

Film Type	PNLC Smart Film
Default State (Off)	Crystal clear — no power required
Privacy State (On)	Fully frosted
Switching Speed	< 1 second
Lifespan	15+ years
Application	Retrofits to existing glass

WHY REVIVE INVERSE

- Energy efficient by design — power is only used when privacy is needed
- Ideal for always-open environments that require occasional privacy
- No power = no cost for standard daily transparency
- Unique technology — a genuine differentiator most competitors cannot offer
- Same professional installation and 15+ year lifespan as all Revive products
- Seamless integration with switches, apps, or automation systems

IDEAL APPLICATIONS

- Healthcare — exam rooms, consultation areas, procedure rooms
- Legal and financial offices — open by default, secured when needed
- Conference rooms that are glass-enclosed in open office layouts
- Residential spaces where natural light is the priority
- Architecturally open spaces where continuous power is a concern
